If you circled any problems, how difficult have these problems made it for you to do your work, take care of things at home, or get along with other people?

- [ ] Not difficult at all
- [ ] Somewhat difficult
- [ ] Very difficult
- [ ] Extremely difficult

ABOUT POSTPARTUM DEPRESSION

It is estimated that postpartum depression (PPD) affects approximately 1 in 9 new mothers in the US annually.  

BE PREPARED
Consider screening your patients at multiple time points:

PRIOR TO DELIVERY
Onset of PPD symptoms can occur during pregnancy. The American Academy of Pediatrics recommends integrating PPD screening and surveillance at the 1-, 2-, 4-, and 6-month well-child visits.

POSTDELIVERY
Consider administering a validated screening tool within 10 days after childbirth.

DURING POSTNATAL FOLLOW-UP
The American College of Obstetricians and Gynecologists (ACOG) recommends continued support as needed with a comprehensive visit no later than 12 weeks after birth.

The American Academy of Pediatrics recommends integrating PPD screening and surveillance at the 1-, 2-, 4-, and 6-month well-child visits. 1,9

Without addressing PPD, symptoms may persist for months or up to a year. 11-13

ABOUT THE PHQ-9 AND INSTRUCTIONS FOR USE

The Patient Health Questionnaire (PHQ-9) is a simple-to-administer, effective screening tool specifically designed to assess symptoms of major depressive disorder, but commonly used to assess symptoms of PPD. Clinicians can quickly score the PHQ-9 once the patient has completed its 9 questions. Administering the PHQ-9 repeatedly allows for assessment of improvement or worsening of depression in response to treatment.

SCORING

Count the number (#) of boxes circled in a column. Multiply that number by the value indicated below, then add the subtotal to produce a total score. The possible range is 0–27. Use the table below to interpret the PHQ-9 score.

INTERPRETING PHQ-9 SCORES

Any woman answering the self-harm question affirmatively should be referred to a psychiatrist immediately. 15

DIAGNOSIS TOTAL SCORE FOR SCORE ACTION

Minimal Depression 0–4 ≤4 The score suggests the patient may not need treatment for depression.

Mild Depression 5–9 5–14 Physician uses clinical judgment about treatment, based on patient’s duration of symptoms and functional impairment.

Moderate Depression 10–14

Moderately Severe Depression 15–19 >14 Warrants treatment for depression, using antidepressant, psychotherapy, and/or a combination of treatment.

Severe Depression 20–27
